Prod. No. is the number of results predicted by chance to have a score streater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New dipeptidyl peptidase IV-related proteins and nucleic acids encoding the proteins, useful for treating e.g. fungal, bacterial, protozoan and viral intecticas, cancers, allergies, neurological disorders, or pain

Dioclasure: Page 72-73; Tl3pp; Balish

and nucleic acids encoding them are useful for treating infectious such as tungal, tacterial, protoxoan and wired infections, particularly intertions caused by human immunodeficiency wires (HIV-10 or HIV-2), pain, diabetes, precedious puberty, intertility, abesity, anotexia, bulimia, Parkinson's disease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, andina pectoris, hypertension, urinary retention, osteoporosis, andina pectoris, stroke, alcers, asthma, allergies, cancers, migraine, comiting, psychotic and negrological disorders (e.g. anxiety, dementia, or extrapolation and algebras are these may like because its its continuity to appear a recent of the treatment of the specific area. The present invertion relates to the isolation of novel human serine proteases reterred to as dipeptidyl peptidase IV (DPPIV) related proteins (DPPI). The dipeptidyl peptidase IV related proteins (DPPP) To dears. ARESOLL ABES343 encode human DPRP proteins
